

2025 Photovoltaic Panel Price Trend

Overview

The global solar panel market is poised for significant shifts in 2025, moving from a period of historic low prices in 2024 to an anticipated increase in module costs. This upward trend is primarily driven by supply-side adjustments in China, including production cuts and the removal of VAT rebates. This guide will brief you on what is the actual photovoltaic panels price in 2025 for households or business uses. It is the combination of both hard and soft costs. Price Stabilization After Volatility: Solar module prices have stabilized in 2025 with global wholesale prices ranging from \$0.28/W, ending years of dramatic fluctuations as supply-demand dynamics rebalance and weak suppliers exit the market. Over the past decade, costs have dropped dramatically, but the changes coming in the next 12 months could be just as transformative.
