

# Automatic Photovoltaic Containerized Type for Aquaculture

## Overview

---

Aquavoltaics integrates clean energy into fishery operations: Daytime solar drives pumps; batteries supply night-time oxygenation. Solar powers sensors for water temperature, DO, pH, enabling automated feeding/aeration. Supports refrigeration, ice-making, and on-site processing. By Al Kurki, NCAT Program Specialist, and Vicki Lynne and Danielle Miska, NCAT Energy Engineers This publication examines the use of solar photovoltaic (PV) technology in aquaculture. It outlines key questions to keep in mind if you are considering solar arrays for a closed aquaculture system, and. Aquavoltaics (also called fishery-solar hybrid) is a breakthrough model where solar power generation coexists with aquaculture. The principle is straightforward: “solar above, fish below. ” Floating PV systems generate clean energy while ponds, reservoirs, or salt pans continue to support fish. Aquavoltaics – the integration of photovoltaic systems with aquaculture – is fast emerging as a transformative approach to meeting the twin challenges of clean energy generation and sustainable food production. Renewable and Sustainable Energy Reviews 80, (2017), pp. Bodies of water provide essentials for both human society as well as natural ecosystems.
