

China builds a large number of solar power stations

Overview

China installed a record 315 GW (AC) of new solar capacity in 2025, lifting cumulative installed PV capacity to 1.2 TW and pushing non-fossil power sources past thermal generation for the first time. Its PV capacity crossed 1,000 gigawatt (one terawatt, 1 TW) in May 2025. Capacity under construction for China and Europe updated in June 2024, while other regions accurate to December 2023. China's National Energy Administration (NEA) released its 2025 power sector statistics on Jan. It's a stunning visual, but it doesn't even begin to capture the staggering amount of solar power being produced by the People's Republic.

China builds a large number of solar power stations

The Amount of New Solar Power Production Capacity China Is

China's solar energy production is reaching simply staggering levels, dragging energy costs down around the globe.

China's solar capacity installations grew rapidly in 2024

China has more utility-scale solar than any other country. The 277 GW of utility-scale solar capacity installed in China in 2024 alone is more than twice as much as the 121 GW of utility ...

Application scenarios of energy storage battery products

Solar power in China

In 2020, China saw an increase in annual solar energy installations with 48.4 GW of solar energy capacity being added, accounting for 3.5% of China's energy capacity that year. 2020 is currently the ...

China's solar power capacity is on course to surpass coal this year

The increased power capacity would mark a major milestone in the country's long-standing effort to build a cleaner power system.

Solar power in China

OverviewHistorySolar resourcesSolar photovoltaicsConcentrated solar powerSolar water heatingEffects on the global solar power industryGovernment incentives

Photovoltaic research in China began in 1958 with the development of China's first piece of monocrystalline silicon. Research continued with the development of solar cells for space satellites in 1968. The Institute of Semiconductors of the Chinese Academy of Sciences led this research for a year, stopping after batteries failed to operate. Other research institutions continued the development and research of sola...

China is building 74% of all current solar and wind projects, report says

Almost three-quarters of all solar and wind power projects being built globally are in China, says a new report that highlights the country's rapid expansion of renewable energy sources.

H1 2025: China installs more solar than rest of the world combined

China is leading this surge by a wide margin. In the first half of 2025, the country installed more than twice as much solar capacity as the rest of

the world combined, accounting for 67% of

China continues to lead the world in wind and solar, with twice as ...

By the first quarter of 2024, China's total utility-scale solar and wind capacity reached 758 GW, though data from China Electricity Council put the total capacity, including distributed solar, at ...

Why China Built 162 Square Miles of Solar Panels on the World's ...

China is building an enormous network of clean energy industries on the Tibetan Plateau, the world's highest. The intention is to harness the region's bright sunshine, cold temperatures and

China adds 315 GW of solar in 2025 - pv magazine International

China installed a record 315 GW (AC) of new solar capacity in 2025, lifting cumulative installed PV capacity to 1.2 TW and pushing non-fossil power sources past thermal generation for the ...

China breaks more records with

surge in solar and wind power

China's installed solar photovoltaic capacity has now surpassed 1,000 GW for the first time, equivalent to half of the world's total installed solar capacity. The record numbers come as
