

Clean electricity venezuela

Overview

Venezuela has one of the cleanest electricity matrices in Latin America, but this “strength” depends almost entirely on a single source: hydroelectric power. “It is essential to diversify our energy sources in order to face the climate crisis and move towards a more sustainable future,” he said. Nov 21, 2024 Photo: EFE Lorca also. Electricity can be generated in two main ways: by harnessing the heat from burning fuels or nuclear reactions in the form of steam (thermal power) or by capturing the energy of natural forces such as the sun, wind or moving water. A striking majority, close to four-fifths of the electricity consumed, comes from low-carbon sources, almost exclusively hydropower, which makes up more than 78% of the. According to the International Renewable Energy Agency, Venezuela's total energy supply fell by nearly half (-47. 5%) between 2016 and 2021, reflecting both the country's economic contraction and its loss of productive capacity. Non-renewable energy dropped by 52. 9%, while renewable energy decreased. For more than a decade, the residents of Zulia have only had electricity around 50% of the time.

Clean electricity venezuela

Renewable Energy and the Energy Transition in Venezuela: Between
