

Coal-fired power wind-solar-solar-storage integrated power base

Overview

Clean power has reached a critical tipping point, with solar and wind now generating more electricity than coal globally. This round-up brings you the key stories from the energy sector over recent weeks. Top energy news: Renewable energies overtake coal; IEA urges grid investment; US energy firms spend. Embers data shows that solar & wind grew fast enough in H1 2025 to outpace demand, pushing renewables past coal and signalling a huge shift in power mix. Solar and wind are now growing fast enough to satisfy the world's rising appetite for electricity. This development signals. In the US in 2024, wind and solar accounted for 17% of total electricity generation, surpassing coal, which fell to a record low of 15%, according to a new report from global energy think tank Ember.

Coal-fired power wind-solar-solar-storage integrated power base

Global Renewable Surge: How Wind, Solar & Storage are Replacing Coal

Let's delve into how wind, solar, and energy storage solutions are poised to become the primary sources of global electricity generation, providing numerous environmental and economic advantages.

[Renewables overtake coal - and other latest energy news](#)

Renewable energy has produced more electricity than coal for the first time, according to a report from energy think tank Ember. Global electricity demand grew by 2.6% in the first half of 2025 - a rise that ...

How Solar & Wind Overtook Coal in the U.S.A 2025 Renewable Energy ...

In 2024-25, U.S. solar and wind energy sources passed coal in electricity generation for the first time. Learn what this milestone means for the renewable energy industry and how your company can leverage the shift ...

[Ember: How has Global Renewable Energy Overtaken Coal Power?](#)

Solar and wind are now growing fast enough to satisfy the world's rising appetite for electricity. In the first half of 2025 their combined growth exceeded global demand growth by 109%, with solar alone ...

Solar And Wind Energy Overtook Coal As The World's Biggest ...

The latest report from Ember shows that solar and wind power grew faster than global electricity demand, with solar alone covering 83 percent of the increase and shattering records

[Chart: Wind and solar are outperforming coal on](#)

The U.S. electric grid is dangerously dependent on fossil fuels -- but the century-long reign of the country's dirtiest power source may be ending. In the first half of this year, wind and solar generated more ...

Renewables become biggest source of electricity globally for 1st time

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated more power than coal,

[Solar and wind surpassed coal in 2024](#)

According to new data from Ember, solar and wind power produced more electricity than coal in the United States for the bulk of 2024. From January to November of last year, solar and wind provided more ...

[In a historic first, wind and solar combined overtake coal](#)

In the US in 2024, wind and solar accounted for 17% of total electricity generation, surpassing coal, which fell to a record low of 15%, according to a new report from global energy think

Wind and Solar Power Surpass Coal as World's Largest Electricity Source

Clean power has reached a critical tipping point, with solar and wind now generating more electricity than coal globally. The combined output from global wind and solar power has, for the first time, ...
