

# Compact power station factory in netherlands

## Overview

---

These are relatively small nuclear reactors that are not constructed on-site as power plants but are produced in a factory as modular units. The idea is that small modules can be developed and built more quickly, and that the serial and uniform production will provide economies of. Dutch power plant Moerdijk consists of the two cogeneration units "CHP Moerdijk I" and "CCGT Moerdijk II". CHP and CCGT are two acronyms used for cogeneration plants. Moerdijk II is a state-of-the-art unit with a capacity of 426 MW and an efficiency of 58 per cent. The power plant efficiency of light water reactors amounts to. Four conventional nuclear power plants are going to be built in the Netherlands, but startups and the business community are also working on Small Modular Reactors (SMRs), small reactors that will roll off the production line. Why Rolls-Royce SMR?

We are faced with an unprecedented demand for clean energy as global markets seek. Distributed energy station refers to a clean and environmentally friendly power generation facility with low power (tens of kilowatts to tens of megawatts), small and modular, and distributed near the load. Distributed power. Here, we are working on an ambitious project for the production of green hydrogen, contributing to the energy transition towards a greener economy.
