

Cost of large-scale photovoltaic modular energy storage systems used in Australian mines

Overview

The interactive figure below presents results on the total installed ESS cost ranges by technology, year, power capacity (MW), and duration (hr). Market analysts routinely monitor and report the average cost of PV systems and components, but more detail is needed to understand the impact of recent and future technology developments on cost. Consequently, benchmark systems in the utility-scale, commercial, and residential PV market sectors. Most large-scale solar + storage projects use BESS (Battery Energy Storage Systems), designed for 1 to 4 hours of discharge, optimising dispatch to the grid during peak demand or pricing events. Department of Energy's (DOE) Energy Storage Grand Challenge is a comprehensive program that seeks to accelerate. 2024 ATB data for utility-scale solar photovoltaics (PV) are shown above, with a base year of 2022. The Base Year estimates rely on modeled capital expenditures (CAPEX) and operation and maintenance (O&M) cost estimates benchmarked with industry and historical data. This includes considerations for battery cost projections and material price fluctuations.
