

# Distance to base station room energy storage

## Overview

---

5 of NFPA 855, we learn that individual ESS units shall be separated from each other by a minimum of three feet unless smaller separation distances are documented to be adequate and approved by the authority having jurisdiction (AHJ) based on large-scale fire testing. As the adoption of large-scale energy storage power stations increases, ensuring proper equipment layout and safety distances is crucial. These facilities house essential components such as battery containers, Power Conversion Systems (PCS), and transformers.

**25 kWh Single Ground Mounted:** A single-unit ground-mounted system is great for most homes. It fits into smaller outdoor areas. First, let's start with the language, and then we'll explain what this means.
