## Overview

---

Today's solar panels require silver as a component. However, due to Stanford University researchers, solar panels may soon include gold to boost performance and efficiency. Recycling is Key: Recycling old solar panels can help recover gold and other valuable materials, reducing the need for more mining. Solar is Still Good: Even with the impact of gold, solar energy is still much cleaner than fossil fuels. The Future of Solar: The solar industry is growing and using. Is a solar panel a solid waste when a generator reuses or repairs it or when they send it for evaluation for reuse or repair?

How does EPA regulate unused solar panels that are damaged prior to installation under the Resource Conservation and Recovery Act?

How does EPA regulate solar panel. Today's solar panels require silver as a component. Panels that contain heavy metals should be handled like hazardous waste under the Resource Conservation and Recovery Act (RCRA).
