

# Does raising yellow croaker under photovoltaic panels have any impact

## Overview

---

Growing crops under solar panels can help keep them healthy. It protects them from overexposure to the sun, as well as from heavy rain and hail that could damage them. What are the benefits?

Agrivoltaic systems can improve land use by allowing you to produce more. Did you know that animal interference is a leading cause of solar panel damage?

One report found that up to 46% to 89% of efficiency loss in solar panels is due to bird droppings. They wonder if critter protection is. Whether you're a poultry farmer like the Parrys or grow acres and acres of crops, the success of your farm depends on good soil. But we live in a time where the. Farmers can benefit from solar energy in several ways—by leasing farmland for solar; installing a solar system on a house, barn, or other building; or through agrivoltaics.

## Does raising yellow croaker under photovoltaic panels have any impact?

### [The Impact of Solar on Your Farm: Land, Animals, and Savings](#)

Will Solar Panels Contaminate My Soil? What Can I Grow Underneath Solar Panels? Solar Panels' Impact on Animals Depending on the height of the ground mounts you install, a variety of vegetation can be planted underneath the panels that could provide some big benefits to your farm. As far as crops go, solar panels are not going to heat up and dry out anything underneath or around the array. In fact, the panels will actually keep things more temperate for those.
