

# Does the energy storage system require batteries

## Overview

---

A battery energy storage system (BESS), battery storage power station, battery energy grid storage (BEGS) or battery grid storage is a type of energy storage technology that uses a group of batteries in the grid to store electrical energy. This technology ensures clean energy is available 24/7, making it vital for achieving energy independence. Lithium-ion batteries, which are used in mobile phones and electric cars, are currently the dominant storage. Battery energy storage systems (BESS) stabilize the electrical grid, ensuring a steady flow of power to homes and businesses regardless of fluctuations from varied energy sources or other disruptions.

## What is battery storage?

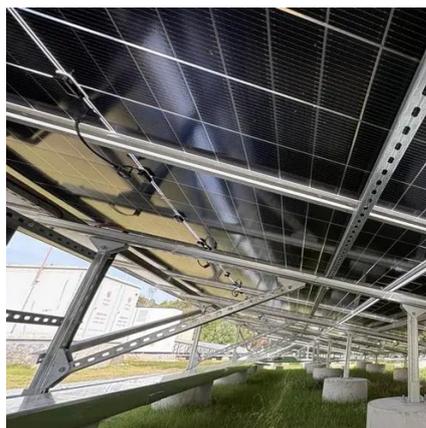

Why Is Battery Storage Important and What Are Its Benefits? How Exactly Does A Battery Storage System Work? What Renewable Energy Storage Systems Are Being developed? Storage of renewable energy requires low-cost technologies that have long lives - charging and discharging thousands of times - are safe and can store enough energy cost effectively to match demand. Lithium-ion batteries were developed by a British scientist in the 1970s and were first used commercially by Sony in 1991, for the company's handheld v See more on nationalgrid epa.gov[PDF]
