These test procedures include available energy capacity; charge duration; rated continuous power; auxiliary load determination; roundtrip efficiency; response, rise, and settling time; harmonic distortion; self-discharge rate; startup and shutdown time; charge/discharge. UL 9540, the Standard for Energy Storage Systems and Equipment, covers electrical, electrochemical, mechanical and other types of energy storage technologies for systems intended to supply electrical energy. The Standard covers a comprehensive review of ESS, including charging and discharging. The objective of this manual is to provide specific, repeatable, detailed test procedures to feed these comparisons with a focus on utility requirements for energy storage. The work presented in this updated version of the test manual combines two separate objectives: 1) exhaustive scoping to. Provides guidance on the design, construction, testing, maintenance, and operation of thermal energy storage systems, including but not limited to phase change materials and solid-state energy storage media, giving manufacturers, owners, users, and others concerned with or responsible for its. Energy storage system cabinet test s nents,wind generation and conventional batteries. However,there are currently no IEEE,UL or IEC standards that yet pertain specifically to this new generation of ntegrated battery energy storage system products.
