

# Energy storage for load shifting thailand

## Overview

---

Northern Thailand's energy storage project in Chiang Mai marks a turning point for renewable energy adoption across Southeast Asia. It can enhance the reliability and stability of the grid at the power generation end, regulate power between generator, renewable energy, and loads, thus. EGAT has installed grid-scale BESS to manage fluctuations of renewable energy in certain areas, such as Chai Badan Substation in Lop Buri Province (21 MWh) and Bamnet Narong Substation in Chaiyaphum Province (16 MWh). Announced last month, this initiative aims to solve the region's persistent power fluctuations while supporting Thailand's 2037 Carbon Neutrality Roadmap.
