

# How big of an inverter does a typical family car support

## Overview

---

“Most family cars do best with 1,000W inverters. ” – EK SOLAR Technical Team

Your car battery's ampere-hour (Ah) rating determines runtime. A 60Ah battery can theoretically support a 600W load for 1 hour ( $600W \div 12V = 50A$ ; 60Ah). Your car's cigarette lighter can typically handle a 150 to 200-watt inverter. For anything larger, you must connect directly to the battery. The maximum safe inverter size depends on your car's alternator—a good rule is to not exceed 50% of your alternator's total output to prevent damage and. To calculate the maximum size of an inverter that your car can handle, you need to determine the maximum amperage that your car's electrical system can provide. Experts recommend that you select an. The inverter is the device that converts power from battery-powered electronics to the voltage used by your car (120 volts).
