## Overview

---

A Containerized Energy Storage System (CESS) operates on a mechanism that involves the collection, storage, and distribution of electric power. The primary purpose of this system is to store electricity, often produced from renewable resources like solar or wind power, and release. Imagine a fully customized energy solution, pre-assembled inside a standard shipping container, ready for delivery anywhere in the world. With minimal on-site setup, it can immediately begin providing reliable, controllable electricity. These systems leverage standardized containers to house energy storage components, making deployment scalable and flexible.
