

# How much electricity can a storage station charge in one hour

## Overview

---

1-Hour System: A 100 kW / 100 kWh system can deliver 100 kW of power for 1 hour. The longer the duration, the more energy (kWh) the system stores relative to its power. Energy storage stations can store varying amounts of electricity based on multiple factors, including the technology employed, capacity ratings, and design specifications. In general, these facilities are capable of holding from several kilowatt-hours (kWh) to several gigawatt-hours (GWh) of. The duration of a battery storage system refers to how long it can discharge its total energy capacity at its rated power. Let's break it down: Battery Energy Storage Systems (BESS): Lithium-ion BESS typically have a duration of 1-4 hours.
