

# How much power does the inverter support

## Overview

---

A quick rule is to divide watts by 10 for 12V systems or 20 for 24V systems. For more accuracy, divide the load by the actual battery voltage and adjust for inverter efficiency (typically 85%). Result: To power the above appliances simultaneously, you'll need a minimum inverter size of 600 watts. 4 adds extra security if any of your appliances are inductive loads. An inverter needs to supply two needs: Peak or surge power, and the typical or usual power. For a connected load of 250 watts, the inverter uses less than 270 watts from the battery. Some energy gets lost in the process. It converts direct current (DC) typically sourced from solar panels, batteries, or generators into alternating current (AC), which is the standard form of electricity.
