

# How to solve the problem of excessive leakage current of photovoltaic panels

## Overview

---

There are two distinct methods to eliminate the leakage current in the solar PV array system: (i) obstruct the leakage current, (ii) reduce the variation/constant common-mode voltage. Let's face it – nothing kills the vibe of a sunny rooftop faster than discovering your photovoltaic (PV) panels are leaking current like a sieve. But before we dive into, tribute to the current leakage to protective earth (PE) electrician with an appropriate measurement equipment at frame where PV panel are mounted, and its val between the solar cells and the grounded metal frames. Understanding the symptoms of overload leakage, 2. Some recommend completely ignoring the matter, while others do recommend monitoring the phenomenon and executing a systemic solution once every few years. Solar photovoltaic (PV) array systems can suffer from reduced performance due to parasitic capacitances that create a closed-loop path, causing leakage current. But there's good news: we've developed a passive filter that.
