

# Increased renewable energy penetration finland

## Overview

---

Finland's updated integrated climate and energy plan aims for at least a 62 % share of renewable energy in final energy consumption by 2030. Finland is a front runner in the EU in terms. In Finland, the transition from fossil to renewable energy sources is well under way; however, recent declines in electricity prices have slowed the pace of new investments in renewable energy production. The method applied 2023 hourly capacity factors to 2030 installed capacity and consumption estimates provided by Fingrid to.

## Increased renewable energy penetration finland

### Share of renewable energy in final energy consumption , Finland

Finland's updated integrated climate and energy plan aims for at least a 62 % share of renewable energy in final energy consumption by 2030. Alongside mitigating climate change, a key ...

### [Implementation of bioenergy in Finland - 2024 update](#)

With nuclear energy, most bioenergy, as well as other types of renewable energy (hydropower, solar, wind) being produced domestically, this leads to an overall energy import dependency of 40%.

### Renewable energy

In Finland renewable energy sources represent about 40 per cent of energy end-consumption. The aim set in the National Energy and Climate Strategy to 2030 is to increase the use of renewable energy ...

### Renewable energy analysis for 2023 and estimate for 2030 in ...

Our analysis reveals that renewable energy, particularly wind and solar power, will play a pivotal role in Finland's future energy landscape. Wind energy is expected to become the dominant energy source ...

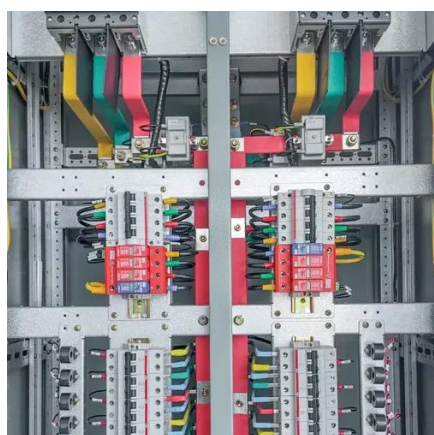

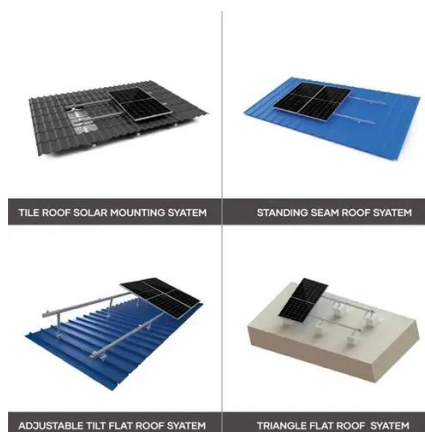

## THE WORLD ENERGY TRILEMMA FINLAND

efficiency across various sectors. In recent years, Finland's energy landscape has shifted significantly, moving away from coal and other fossil fuels and increasing its reliance on renewables, nuclear power,

### [Finland and renewable energy . Power and Energy](#)

As of 2024, Finland is actively pursuing a transition to increase renewable energy's share to 50% of total energy consumption by 2030, aligning with European Union climate goals.

## Energy production

Finland has already almost reached its share of the 2030 renewable energy increase target (42 %) and emission reductions from energy production are progressing under the EU's emissions trading scheme.

## Renewable Energy 2025

Pursuant to its current National Energy and Climate Strategy, Finland aims to increase the share of renewable energy to more than 50% of end consumption by 2030.

### [Executive summary - Finland 2023 - Analysis](#)

Finland plans to achieve carbon neutrality by maintaining a high share of nuclear energy, increasing electricity generation and heat production from renewables, improving energy efficiency, and ...

### **Renewable energy in Finland**

Renewable energy in Finland increased from 34% of the total final energy consumption (TFEC) in 2011 to 48% by the end of 2021, primarily driven by bioenergy (38%), hydroelectric power (6.1%), and ...
