

# Is it normal for a photovoltaic panel to be slightly dented

## Overview

---

Far from it! To keep solar cells safe, manufacturers protect them with a layer of tempered glass and the plastic back sheet. These layers are sealed tightly to prevent the internal corrosion. However, like any technology, solar panels are not immune to defects. In this blog, we will explore the most common solar panel defects, backed by data and. If you are wondering if your panels are fine or if they need replacing or repairing, then you've come to the right place.
