

Kiribati Solar Energy System Project

Overview

The “Electrification of Kiribati's Line Islands Powered through Solar Energy” (EKLIPSE) project, launched in mid-2024, aims to enhance power security by integrating solar energy with batteries to reduce reliance on diesel generators. In the heart of the Pacific Ocean rests Kiritimati Island. Recognized as the world's largest coral atoll and a vital development hub for Kiribati. With approximately 8,000 residents and a rapidly growing population, Kiritimati has historically depended on imported diesel to meet its energy. The proposed project will initiate and contribute to the transformation of the Kiribati energy sector to one that is low-carbon and adapted to growing climate and natural hazards. It will be accompanied by a battery energy storage system (BESS). 5 MW South Tarawa Renewable Energy Project. Installation, operation and maintenance of Solar mini-grid at the remote islets of Tebikerai and Nuotaea complemented with RO system for producing freshwater in the two remote islets. We work towards a Pacific Vision of peace, harmony and. Imagine living on islands where diesel generators guzzle \$0. 85/kWh fuel while seawater creeps into freshwater lenses. With 70% of urban households experiencing daily blackouts during peak hours.

Kiribati Solar Energy System Project

The groundbreaking ceremony of the renewable hybrid system of ...

The Government of Kiribati joined the Asian Development Bank and other development partners in the STREP& STWSP groundbreaking ceremony to officially mark the first step toward the construction of ...
