This report is available at no cost from the National Renewable Energy Laboratory (NREL) at [www.nrel.gov](http://www.nrel.gov). National Renewable Energy Laboratory, Sandia National Laboratory, SunSpec Alliance, and the SunShot National Laboratory Multiyear Partnership (SuNLaMP) PV O&M Best Practices. exposure to UV light, rain, and wind could contribute to the occurrence of module failures. Knowing this fact, operation & maintenance (O&M) operators have essential, comprehensive guidelines for climate-specific O&M programs have yet to be developed. Conducting regular O&M ensures optimal performance of photovoltaic (PV) systems while. The inverter used is a TBB Apollo Maxx which is a multi-functional inverter, combining functions of inverter, solar charger and battery charger to offer uninterruptible power support in a portable size. The battery used is a Ritar DG 12V200Ah battery. An AC distribution. Digital Realty currently has 19 sites hosting behind-the-meter solar installations totaling 9. The company tells us it has an “additional roadmap to continue to grow, with additional projects in the planning or construction stage. While we often think of solar as a “set it and forget it” technology, proper maintenance ensures systems meet production targets, maintain warranties, and operate.
