

Micro classroom of State Grid Control Class

Overview

This course covers fundamental concepts of microgrid design from a community-centric perspective and emphasizes a holistic approach to energy systems management. LEAPS offers over 300 hours of training in microgrid and grid modernization topics. Microgrid technology is an advanced technology developed in recent years as a critical competence of traditional power networks with reliable and efficient. Organize and share your learning with Class Central Lists. Design and optimize distributed energy systems integrating solar, storage, and renewable sources for resilient power solutions. In contrast to conventional power systems, microgrids exhibit greater sensitivity to fluctuations in demand due to their reduced rotating inertia and predominant reliance on.
