Overview

For an average 16 kW of solar / middle-range off-grid microgrid, Nesbit says the cost for a completely installed system, including permitting, is going to run approximately \$80,000 to \$90,000. That also includes a bit of training. Falling technology costs and improving efficiency make containerized solar energy storage systems increasingly affordable in remote areas. Solar panel prices have dropped 82% since 2010, while lithium-ion battery costs decreased 89% over the same period. This enables 20-foot containerized systems. As demand is rising around the world for off-grid power in far-flung, mobile, and emergency applications, people want to know how much does a solar container system cost?
