## Overview

---

Hydroelectric Power Plant Control Room: These control the flow of water through turbines. They manage dam gates, water flow, turbine speed, and power generation. ): These control rooms monitor and manage. Modern electric grids, at the heart of the energy transition, require a new type of control room - one that enables innovative functions and full automation. These nerve centers track electricity production, demand, and distribution, making quick decisions to keep. Our power plant control room enhances the control room operator's output for critical monitoring, identifying areas to improve overall plant reliability, optimizing process performance, and protecting asset uptime. The new Enel Green Power control room in Mexico City looks like something out of a science fiction movie. It's like a space opera that chronicles the epic saga. Ovation Green SCADA systems support grid stability and operational flexibility for any solar farm or plant type.
