

Photovoltaic panel dust accumulation test

Overview

This paper reviews the impact dust accumulation for long-term on the performance of photovoltaic (PV) modules. Dust accumulation on photovoltaic (PV) modules is a major factor contributing to reduced power output, lower efficiency, and accelerated material degradation, particularly in arid and industrialized regions. Here, we investigated the dust and its influence on solar modules, both polycrystalline and monocrystalline. The specified site had four horizontally oriented 80 W PV modules.
