

Photovoltaic panels and wind power principles

Overview

While solar panels capture photons, wind turbines harness the kinetic energy of moving air. As the sun heats the Earth unevenly, differences in temperature and pressure drive air currents. And these renewable sources of electricity support peoples' lives without emitting the planet-heating gases that come from burning fossil fuels like. To capture complementing solar and wind resources, the wind turbine and solar panel combination system blends. In 1905, Albert Einstein published a paper explaining the photoelectric.
