

Photovoltaic panels for heating in the north

Overview

Yes, you can install solar panels on a north-facing roof, but efficiency will be lower compared to south-facing panels. In the Northern Hemisphere, south-facing surfaces traditionally offer the strongest solar yield, while north-facing angles receive less direct. For regions located in the northern hemisphere, the selection of solar energy technologies is critical for optimizing efficiency. Photovoltaic (PV) panels, which convert sunlight directly into electricity, are often the go-to choice due to their versatility and advancements in technology making. After installing over 2,000 solar roofing systems across Texas since 2008, I've seen homeowners face the north-facing roof dilemma countless times. As a GAF Master Elite contractor with advanced solar installation certifications, I've helped hundreds of property owners navigate this exact. A well-designed passive solar home first reduces heating and cooling loads through energy-efficiency strategies and then meets those reduced loads in whole or part with solar energy.
