

Photovoltaic support ballast

Overview

A solar ballast system is an engineered mounting solution that utilizes calculated weight distribution—typically concrete blocks or specialized weights—to secure solar panels to flat or low-slope roofs without any roof penetrations. For more than a decade, the goal of Sun Ballast® has been to make the work of designers and installers of PV systems on flat roofs easier and faster: this is why simplicity and quick assembly have been the hallmark of all PV ballasts since 2012. Unique, innovative, and patented structures have. In the evolving landscape of solar energy installation, solar ballast systems have emerged as a revolutionary approach for flat roof applications. We will also delve into the drawbacks, including weight limitations, potential for wind uplift, and.
