

Photovoltaic support construction in the pond

Overview

Modern pond photovoltaic supports aren't just plastic floats—they're precision-engineered systems. The Baicheng City project (2024) demonstrated: "Floating solar reduces water evaporation by up to 70%, making it ideal for drought-prone regions. " — 2024 Renewable Energy Trends Report. Modern society demands food and sustainable energy, so science has an idea: To preserve agricultural land for crops and conservation lands for wildlife, place floating photovoltaic panels on lakes, rivers and reservoirs. The design process, system components. Floating solar photovoltaic energy installations (FPV) are solar panels sitting atop human-made bodies of water. By Q1 2025, floating solar capacity exceeded 5 GW worldwide, with Asia leading 62% of installations.
