

# Reactor solar Inverter

## Overview

---

The Inverter Reactor helps to regulate the voltage. It stores energy in its magnetic field when the voltage is high and releases it when the voltage drops. In a solar power system, the. An inverter DC reactor plays a crucial role in ensuring the smooth operation of your inverter system, which is a key function of inverter technology. Reduce. The reactors that match the inverter are generally divided into two types: AC Reactors (input reactor, output reactor) and DC reactor. These reactors will stabilize the power flow and. Reactors for LCL and LC filters on the network side They are used to filter the high-frequency ripple caused by the inverter's PWM, smoothing the voltage wave at its output.
