Overview

FlexGen provides turnkey and hardware-agnostic solutions for designing, integrating, and operating energy storage assets to address the top four challenges of speed, cost, reliable cutovers, and power quality faced by data center developers. The rise of artificial intelligence has catalyzed the exponential expansion of data center computing needs, and with it, the power demands required to operate these facilities. To meet this need, battery energy storage systems (BESS) will drive critical infrastructure development and maximize the. B-Nest™ is a modular, multi-story structure designed to house battery energy storage systems (BESS) for unparalleled energy density. Compliant with the most stringent international fire codes and safety regulations, the B-Nest™ is a bankable and fully insurable solution that can be deployed. “Today's problem is dealing with extreme power jitter. We are having some power fluctuation issues, when you do synchronized training it's like having an orchestra and it can go loud to quiet very quickly, at the sub-second level.
