

# Rome energy storage for demand response

## Overview

---

The objective of the PIONEER project is to store excess energy produced during the day by the solar PV plant, returning it when most needed to cover the peak demand of airport facilities during the evenings, when solar energy becomes unavailable. Demand response and energy storage are sources of power system flexibility that increase the alignment between renewable energy generation and demand. For example, demand response provides a means to shift demand to times of relatively high wind generation and low load, while storage technologies. Following the successful submission of the PIONEER project's proposal in the framework of Innovation Funds Call for small scale initiatives, the relevant Grant Agreement was signed by the funding authority (CINEA), the project's Coordinator (Aeroporti di Roma) and the project's partners (Enel X and. The PIONEER project involves the design, construction, start-up and operation of a system made up of second-life batteries from the automotive sector for the storage of excess power produced by a 30MW solar photovoltaic plant. The project will be developed at Rome Fiumicino International airport. In addition to providing customers with backup power, storage can provide grid benefits, by shifting household demand to off-peak times. The number of installed stationary battery energy storage systems (BESS) is growing significantly.

## Rome energy storage for demand response

---

### [Overview of Utility Residential Energy Storage Demand ...](#)

Overview In addition to providing customers with backup power, storage can provide grid benefits, by shifting household demand to off-peak times. This behavior reduces network peaks and ...

### **INNOVATION FUND**

The project will be developed at Rome Fiumicino International airport and the energy stored will cover evening peak-demand, while also providing flexibility services to the grid.

### [Demand Response and Energy Storage Integration Study](#)

This study is a multinational laboratory effort to assess the potential value of demand response and energy storage to electricity systems with different penetration levels of variable renewable resources ...

### **Pioneer project**

The project will be developed at Rome Fiumicino International airport and the energy stored will cover evening peak-demand, while also providing flexibility services to the grid.

## THE ROLE OF STORAGE AND DEMAND RESPONSE

By shifting supply and demand patterns, storage and demand response can not only significantly increase the penetration of VRE, but also can provide other significant sources of value such as ...

### **Italy's Energy Storage Policies: Accelerating the Renewable Transition**

But here's the silver lining - the new cross-border storage initiative with France and Switzerland could add 15GW of flexible capacity by 2030. As we approach Q4 2025, all eyes are on how Italy balances ...

### **Energy storage and demand response as hybrid mitigation technique ...**

The paper discusses various energy storage and demand response programs proposed in the literature, including their types, applications, challenges, and capacities. It also presents ...

## RENMAD STORAGE ITALIA 2026

As Italy continues scaling up its energy storage infrastructure, the rise of large BESS projects marks a transformative phase in its energy transition. By 2050, Italy aims to achieve 30-40 GW of storage ...

## When in Rome, do as the Romans do

There are multiple ways in which energy storage can be applied to meet these needs. The feasibility of each application or use case, however, varies significantly across different energy ...

### [Beyond traditional demand response: How energy storage is](#)

Energy storage systems are a critical tool in this transformation, offering a more dynamic and reliable approach to demand management. Traditional demand response programs rely on utility
