Theoretical Framework: Twenty-one scientific articles published in international journals over the last six years that discuss the issue of large-scale photovoltaic solar energy production, the consequences for communities, and the social and environmental impacts were. Stimulated by climate change, sustainability concerns have increased the literature on socioeconomic impact assessments of solar energy and Photovoltaic (PV) technologies. PV systems have gained prominence as a key renewable energy source since the early 2000s. Anticipated shifts in behavior. This paper aims to uncover the role of social and environmental issues play within the assimilation of photovoltaic energy infrastructure based on a systematic literature review and different studies results analysis. However, controversy still exists regarding the key antecedents of households' intention to adopt solar photovoltaic technologies. Effective use of solar energy depends on the proper knowledge on its use and techniques.
