

# Solar photovoltaic panels generate electricity for your own use

## Overview

---

They use this sunlight to create direct current (DC) electricity through a process called "the photovoltaic effect. But have you ever wondered how they do it?

At a high level, solar panels are made up of solar cells, which absorb sunlight. Small PV cells can power calculators, watches, and other small electronic devices. Larger solar cells are grouped in PV panels, and PV panels are connected in. Solar power works by converting energy from the sun into power. This article explores how photovoltaic systems work in residential settings, addresses safety concerns, and shares real-world success stories.
