

The bracket battery solar light is always on

Overview

The reason your solar lights are staying lit during the day is likely due to a faulty night reading, often caused by water or dirt getting inside the light and causing it to malfunction. Check the solar panel for obstructions that may prevent it from charging properly, 2. Inspect the light sensor to ensure it is functioning and unobstructed. The sunshine charges the lights in the daytime so they have enough 'juice' to stay fully lit when its dark out. Solving this can be tricky, especially if the sensor is not broken. We will look at each of these reasons in detail in the upcoming sections.
