

# The function of the generator exhaust window is

## Overview

---

The main function of a diesel generator exhaust system is to safely remove harmful gases produced during operation. As the engine burns fuel, it creates exhaust gases that must be vented out of the generator and away from people and equipment. When a generator is installed and operated in an indoor environment, adequate ventilation for heat dissipation and combustion is required. When ever possible, face the generator. The use of gas fired, and diesel fueled generators for back-up power and co-generation is increasing due to a higher demand on the current electrical infrastructure, the growing need for backup power and the necessity to improve overall efficiency to ensure uninterrupted power. Cooling air refers to the flow of air that removes radiant heat from the engine, generator, other driven equipment and other engine room components.

### [12 Parts Of A Generator \(Functions Described\)](#)

The main parts of a generator are the frame, engine, fuel system, starter mechanism, lubrication system, alternator, voltage regulator, enclosure, control panel, exhaust, battery, and ...

## Generator Exhaust Systems

Generator exhaust systems need to be properly designed to ensure correct engine performance and safe operation. System design has become more complex with the desire to keep emissions low, ...

## Generator Engine Room Ventilation

This prevents pressurizing engine room (reducing generator ventilation airflow) when doors are closed and air source valve is positioned to provide outside air to generator.

## Design of Air Inlet and Exhaust Route in Diesel Generator Room

A good ventilation system in the diesel generator room must ensure that there is enough air in and out, and free circulation can be achieved in the engine room.

## [Diesel Generator Exhaust System Design Guide - Jubaili Bros](#)

A properly designed exhaust system extends generator life, reduces operating costs, and ensures compliance with safety and environmental codes. Managing noise, heat, and back-pressure with ...
