

# The photovoltaic panels in Heilong Village were blown away

## Overview

---

Many panels were twisted, torn apart, or blown from their frames. Floating solar arrays installed on fishponds with flexible support structures were hit particularly hard. Reports indicated that about 60% of modules in one project were dislodged, while the remainder. Additionally, the disaster resulted in damage to renewable power infrastructure, including rooftop solar systems and solar photovoltaic plants. Following the devastation wrought by Typhoon Yagi in Hainan, the Leizhou Peninsula, Vietnam and Myanmar, Typhoon Bebinca made landfall in Shanghai on the 2nd September 2023 - (Hong Kong) Lei Cheng Uk Estate in Cheung Sha Wan faced a challenging situation during Typhoon Saola as the strong winds proved too much for the solar panels installed on the rooftops. Classified as level 17, the storm held above level 12 winds for nearly ten hours, making it the strongest typhoon. Typhoon Doksuri unleashed its fury on southeastern China's Fujian province over the weekend, causing significant damage to the region's energy infrastructure. The storm's wrath was felt in the form of dozens of shattered photovoltaic (PV) panels and jeopardised six gas pipelines, leading to power. Trees fell, objects fell from high altitudes, and facilities were blown over in many places.
