

# The process of generating electricity in a solar power plant

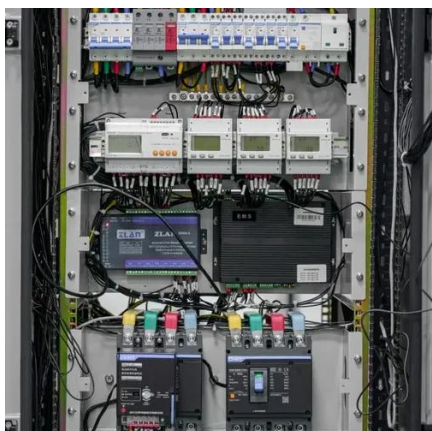

## Overview

---

Photovoltaic technology converts sunlight directly into electricity. These cells are often grouped into solar panels found on rooftops or solar farms. Solar thermal systems focus on utilizing. The amount of sunlight that strikes the earth's surface in an hour and a half is enough to handle the entire world's energy consumption for a full year. The flow of electricity results from the characteristics of the semiconductors and is powered entirely by. A solar power plant is a complex system and its basic goal is to capture sunlight and convert it into electricity.
