

The upper and lower length of photovoltaic panels

Overview

Most solar panels fall within a length range of 67. Panel “Size” vs Physical Dimensions: The most critical distinction for homeowners is that solar panel “size” refers to electrical output (measured in watts), not physical measurements. A 400W panel has the same physical footprint whether it produces 350W or 450W – the difference lies in cell. The dimensions of 60-cell solar panels are as follows: 66 inches long, and 39 inches wide. That's basically a 66×39 solar panel. But what is the wattage?

That is unfortunately not listed at all. This size offers the best balance between power output, handling ease, and fitting standard roof dimensions. Source: E-greenelectrica If your system produces more energy than you need, you can send it to the grid, giving you credits from the utility company.
