## Electricity generation

OverviewHistoryMethods of generationEconomicsGenerating equipmentWorld productionEnvironmental concernsCentralised and distributed generation

Electricity generation is the process of generating electric power from sources of primary energy. For utilities in the electric power industry, it is the stage prior to its delivery (transmission, distribution, etc.) to end users or its storage, using for example, the pumped-storage method. Consumable electricity is not freely available in

nature, so it must be "produced", tra...
