

Three solar power plants in Cambodia

Overview

Just two solar power plants are up and running in Cambodia at present, one a 10-MW plant developed by Singapore's Sunseap and another, 60-MW facility in Kampong Speu. Cambodia generates solar-powered energy from 3 solar power plants across the country. The country plans to significantly scale up capacity in the coming decades to strengthen the energy grid and reach its net-zero emissions goals. Decisions made today regarding sources of fuel and power generation will determine whether or not this ASEAN (Association of Southeast Asian Nations) member country will set itself on a path of sustainable energy and development. Cambodia is leaping its track in transition to clean energy, with solar farms set to double their electricity this year to the national grid. A report from the Electricity Authority of Cambodia (EAC) showed that solar farms are set to generate approximately 720MW of electricity this year to the. The dataset of a solar power plant in Cambodia is extracted from the Mekong Infrastructure Tracker Dashboard available in Cambodia.

Solar and Cambodia's National Strategic Development Plan
Solar at Cambodia's Water-Food-Energy Nexus
The Cambodian Cabinet approved four energy projects this past April, a US\$231 million hydroelectric power and three solar power projects with a combined, rated, maximum power capacity of 140 MW. The latter are expected to come online and dispatch power to the national grid by 2020 and 2021 in four different provinces. Some 347 households and farmla See more on solarmagazine Enverus
