

Vienna electricity regulations

Overview

The National Council has passed the new Electricity Industry Act (EIWG) by a large majority: modernization of the electricity market, greater security of supply, social measures, and expanded rights for energy communities. This aims to provide regulations for an equal, fair, consumer friendly and transparent energy market. The concept of energy communities is enshrined in EU law in the Clean Energy Package as a central component of the decentralised energy transition. The EU Electricity Directive (2019/944), most recently amended by Directive 2024/1711, and the RED II Directive (Renewable Energy Directive). A concession is required for the operation of an electricity distribution network (Art. 54 Vienna Electricity Act 2005). This concession may only be granted if the applicant is able to ensure economical, sufficient and secure distribution and meet their responsibilities, and if no other concession. Yesterday, December 11, 2025 The Austrian National Council passed the new law with a two-thirds majority. The Austrian internal energy supply is based on a balanced mix of energy sources. An estimated one-third of Austria's energy needs is supplied by domestic production. Austria has announced what it calls the most significant overhaul of its energy system in two decades, aiming to lower electricity prices, reduce bureaucracy, and provide greater fairness for consumers, reported by Die Presse and the Austrian News Agency APA.
