An alkaline battery (IEC code: L) is a type of primary battery where the electrolyte (most commonly potassium hydroxide) has a pH value above 7. Typically, these batteries derive energy from the reaction between zinc metal and manganese dioxide. Compared with zinc-carbon batteries, alkaline batteries have a higher energy density and longer shelf life yet provide the same voltage.

### What Are Alkaline Batteries? Complete Guide with Benefits, ...

Alkaline batteries are a disposable battery that is often used in a variety of everyday electronic devices. These batteries are called "alkaline" because they use potassium hydroxide as an ...

### A Comprehensive Guide to Alkaline Batteries: Powering the ...

Known for their long shelf life and impressive energy density, alkaline batteries are commonly used in a wide range of devices, from remote controls and flashlights to toys and digital cameras.
