

What is an uninterruptible power supply vehicle

Overview

An Uninterruptible Power Supply (UPS) is defined as a piece of electrical equipment which can be used as an immediate power source to the connected load when there is a failure in the main input power source. A UPS differs from an auxiliary or emergency power system or standby generator in that it will provide. An uninterruptible power supply is something you might not think about until you really need it. From the basics of how they work to the advanced features that can save your data, we will explore the ins and outs of UPS systems and show why it is crucial to have a battery backup on hand. It ensures your critical systems keeps going even when the power grid doesn't.
