

# What is the maximum wattage that a 12v inverter can produce

## Overview

---

With proper system design, you can safely extract 15-20% more power than basic calculations suggest. Again, a 12V 30A battery can produce a maximum power output of 120V and 3A. The power of the battery is 360W ( $12V \times 30A = 360W$ ). Power isn't created but simply. If you have two 240v sockets on your car, you'll need an inverter rated at 500 watts. Inverters come in different sizes and price points, so it's essential to purchase the correct size for your needs. Inverter Efficiency: High-quality inverters operate at 90-95% efficiency, while cheaper models may drop to 80%. While it is technically possible to run higher wattage inverters (up to 1500 watts), sustained use at high power strains the battery and electrical. What is the max size inverter (wattage) I could get for my 12v 230ah battery?

What battery chemistry is your bank?

Lead-Acid will only let you use about half of those ah before the battery is damaged from over-discharge. LiFePo4 will let you use nearly all of them before permanent damage is done. As a rule of thumb, the minimum required battery capacity for a 12-volt system is around 20 % of the inverter capacity.
