Overview

Solar energy storage is fundamental for maximizing the potential of renewable energy by enabling the accumulation of excess energy generated during sunny periods for utilization during times of low production or peak demand. The AES Lawai Solar Project in Kauai, Hawaii has a 100 megawatt-hour battery energy storage system paired with a solar photovoltaic system. Sometimes two is better than one. The reason: Solar energy is not always produced at the time. In simple words, it is a system that not only produces electricity thanks to solar panels but also stores it in dedicated batteries to be used when the sun is not shining. And it is precisely this ability to "store the sun" that is making storage a valuable ally for those seeking energy. Energy storage facilities are becoming an increasingly popular solution among owners of photovoltaic installations. Click the image to download the free selling technologies (solar+storage).
