

White cracks on photovoltaic panels

Overview

Microcracks, also known as microfractures, are tiny cracks in photovoltaic cells. This type of solar degradation is often caused by mechanical stress during installation, transportation, or environmental factors like temperature fluctuations. Over 23% of solar system owners report similar discolorations within the first 5 years of installation according to the 2023 Gartner Emerging Tech Report. When the current flows through the solar cell. However, sometimes they separate which is called the delamination of solar panels. It leads to corrosion and eventually to the failure of a PV module. To identify hotspots, use thermal imaging during the.
