

White stains on the back of photovoltaic panels

Overview

The most common cause of white spots is moisture seeping into the module laminate. A solar module is built like a sandwich, with the solar cells and encapsulant sealed between glass and a backsheet. The edge seal is the first line of defense against the elements. They might seem like a minor cosmetic issue, but these „white spots“ are often the first visible signs of a deeper problem that can compromise a module's performance. If you've noticed mysterious white spots on your photovoltaic (PV) panels, you're not alone. This issue may affect the aesthetic appearance of the panels, but it does not generally impact their functionality or efficiency. It leads to corrosion and eventually. Why do solar panels turn white?

Solar panels may appear white for various reasons, primarily associated with 1. Surface contamination often results from dust, bird droppings, or pollen that accumulates.
