Wind turbine for exhaust

Wind-Driven Turbine Exhaust Fans

Wind-driven turbine ventilators help to remove hot air in summer and moisture-laden air in winter. The turbine rotates as the wind blows, which creates an upward draft that draws air up and out of the ...

Roof Turbine Ventilators

Roof turbine ventilators use the wind to exhaust hot, stale air from commercial buildings and replace it with cool, fresh air.

Envira-North Systems Ltd

The Hurricane(TM) Turbine is a wind driven roof exhaust fan. This natural turbine ventilator is an alternative to traditional industrial ventilators that perform poorly and consume energy.

Fans for wind turbines , Wind turbine cooling , ZIEHL-ABEGG

For example, fans are used for generator cooling in order to dissipate warm exhaust air from the generator quickly and selectively, ensuring optimum working temperatures. Fans are also used for ...

TURBINE EXHAUST FANS

With the Hurrican wind driven turbine ventilator, the wind strikes the verical vanes causing the head to rotate. The rotating action generates a powerful area of low pressure causing additional air to be ...

Design of an exhaust air energy

recovery using savonius vertical axis

This research aims to design an exhaust air energy recovery system using a Savonius-type wind turbine and to investigate its performance. The prototype design was created using ...

Turbine ventilators: An advanced technology to save lives

Turbine ventilators are essential additions to the roofs of industrial factories. They help to dispose of exhaust airflow using negative pressure. The turbine rotates due to the varying pressure ...

Wind-Powered Exhaust Turbines FAQs

Frequently-asked questions (FAQ) about wind-powered ventilation exhaust turbines, how they exhaust air, can they withstand adverse weather, how big and loud and warranty questions answered.
